

Troy, Michigan, September 5, 2006: Systems Technology Group, Inc. (STG) announced that DaimlerChrysler Corporation has awarded STG the Global Warranty Claims Project. STG cited its deep automotive vertical domain expertise as a key factor for winning this mission critical offshore software integration project.

DaimlerChrysler is currently performing a major initiative to re-engineer and re-write its Service Contracts business systems, called VINDriven. STG has been outsourced the responsibilities to execute this complex re-write project since early 2004. At DCX, there are many external systems that interface with the Service Contracts processes. These systems also must be upgraded and converted to interface with the new VINDriven Service Contracts application. One such external system is Global Warranty Claims System (GCS). GCS is the claims system used by Chrysler Group dealers to submit claims for vehicle repairs performed at their dealerships.

STG was awarded a fixed price outsourcing contract for providing end-to-end solution for this project. STG is responsible for all application development life cycle activities including analysis, technical design, construction, testing and deployment.

STG will execute this project from their state of the art offshore software delivery center located in Chennai, India.

About Systems Technology Group, Inc. (STG)

Headquartered in Troy, Michigan, USA, STG is a global information technology services company specializing in providing the Fortune 500 companies with software and systems integration services.
